Titusville Morning Herald.

A Storm in New England.

THE BOSTON PAVEMENTS WHITE—WITH HAIL-STONES — BUILDINGS STRUCK BY LIGHTNING.

At three o'clock the sky became darkened and a huge, black bank of clouds rolled up from the southwest. Its appearance was impressive, and it came on with an air of confidence which seemed to ignore all opposition. It was black and seemed like a huge bag ready to burst from an inward pressure of liquid fire; or like a huge giant with eyes darting fires. By a quarter past three o'clock the cloud had spread like a pall over the city. Low muttering seemed like the overture of the wrath to come. Men and women hurried to their homes, the dogs to their kennels, and the feathered creation to their eyries in the church towers. At a quarter past three o'clock the ball opened; a fiery seam was opened in the cloud, a loud peal of thunder followed, and in thirty seconds more the rain in large drops pattered on the pavement and splashed upon the window-panes. It was a cheering combination of sounds to ears not timid, and promised invigorating inhalations in hours to come. But after fifteen minutes of this music there came a noisy interlude, played upon blinds, skylights, window-panes, tin and other roofs, by hail-stones, the effect being like fifty or sixty thousand policemen standing together and springing their rattles simultaneously. This lasted for fifteen or twenty minutes, during which time people who dared hurried to their windows and gazed upon the frozen spheres, cubes, oblate spheroids, "rectangular cones," "conical pyramids," and other curiously shaped fragments, which, in the absence of our Legendre, we cannot geometrically describe, bouncing about here and there with the utmost looseness. Most of the stones were not larger than the end of one's thumb, while many were as large as a bell knob before they struck the earth, and after that, very small, as the concussion inevitably broke them. There was great irregularity in their shape, and they did not remain long in sight, as a copious shower of rain soon dissolved them.

The lightning had been almost incessant up to this time, but the noise of the hail-stones in many places drowned the voice of the thunder and robbed the storm perhaps of one of its terrors. This rain storm continued till about 4½ o'clock, and people were beginning to hope that they would have no more, as it was for a moment a little lighter above. But suddenly there was a most vivid flash of lightning, followed instantly by a sharp, tearing and almost stunning report. This seemed to be a sort of signal for a general bombardment from all the fortifications above, for in another instant the air was full of falling hail-stones and it was so dark that one could hardly see to read in a room ordinarily very light. The wind here added its blustering notice to the general din, the lightning flashed with tropical frequency and brilliancy, the thunder roared and reverberated with a grandeur almost appalling, and the intense yet almost indescribable clatter of the hail-stones, threatening and inflicting ruin on windows and shutters, completed an *ensemble* of sight and sound at once grand and fearful, and compared to which Beethoven festivals are nowhere.

The hail-stones at this time whitened the pavements in many places, and in back yards beneath sloping roofs they could have been shoveled up by the barrel. The predominating shape of this lot was spherical, and the average size would suggest a boy's marble. True there were many much larger, and several verging upon the size of a man's fist. This storm was terrific while it lasted, and ruthlessly beat down vines, flowers and growing crops wherever exposed, and broke many windows, &c.

This was again succeeded by rain falling copiously and making large rivulets in the streets, and the lightning seemed to be incessant. It was during the half hour from a quarter past five to a quarter before six o'clock that the electricity was in most active play, and forked tongues darted about here and there, tearing the heavens to pieces, visiting the earth at different points, entailing destruction in its path, and stirring up the nerves of the most stolid with its fierceness. Then the fire-bells, pealing forth their sorrowful alarm, suggested that the electric spark had been a familiar and unwelcome visitor in the houses of some, and excited wonder whether or not death had been the portion of others.

Altogether the storm was the most terrific of its kind which Boston has experienced for many years, and we give below some of the details of its effects in Boston and vicinity:

SOUTH BOSTON.

The storm broke over this section of our city with great fury, causing more or less damage to property all down the peninsula. The cess-pools were flooded and choaked up, the sidewalks washed away and unpaved streets gullied, cellars and basements were badly flooded, window glass, skylights in particular, riddled with the hail-stones, vines, shrubbery, and garden fruits nearly if not completely ruined, while the wrecks of the storm were to be witnessed about nearly every homestead.

At the corner of Dorchester avenue and Fourth street, the large manufacturing establishment of the Eagle Vice Company, owned by Mr. W. P. Hunt, was damaged, according to the estimates of the proprietor, not less than $1,200. The water from the streets poured into the basement of the factory in regular cascades, and in less than an hour after the storm began there was at least fifteen inches of water over the floor. The fires in the boilers were extinguished, work was suspended for two hours, and great damage done tools, machinery, casting in process of manufacture, etc.

The Winthrop House on Dorchester avenue, near Fourth street, was damaged to a considerable extent. At six o'clock there were some four or five inches of water in the dining-room, and the landlady, Mrs. Esty, was in great tribulation, while her corps of female assistants flopped about with wet hose and bedraggled crinoline, and occasionally getting an explosive adjective into their remarks about the storm.

South Boston folks are some on big things. They now and then, when in good humor, tell us about their big foundries and factories, big churches, big bridges, big hills and big "doings" when they turn out to do anything. So last evening when they got to spinning some big yarns they told about their big hail-stones. Nobody had the check to claim that they were as big as a Fourth of July balloon, but they did say that many of them were as big as a good sized pumpkin, while the smaller ones were about the size of a base ball, and that they came down in sheets and then broke up into all kinds of shapes and sizes. That'll do for South Boston.

After the storm got fairly under way the lightning began to shoot its forked tongues about the hilltops and spires of the "beautiful peninsula," causing great consternation among women and children whose nerves were not strong enough to endure the terrific spectacle, and giving just a little bit of a scare to many men who are bold enough on ordinary occasions, but who felt their littleness and weakness on beholding the storm king riding through the heavens in his chariot of fire. When the reports of the storm began to come in from different sections, it was learned that the lightning had twisted the spire of the Phillips church from its perpendicular, and done a slight damage to the main building. Hale's rubber factory was touched with the electric spark. A house belonging to Mr. S. S. Grey the paper collar man, was also slightly injured, and a stable on Second street was touched, but no damage was done. It was also reported that a number of large trees upon the more elevated portions of the Point were also split down or unlimbed by strokes of lightning.

Business Women.

AMERICAN WOMEN GOING INTO THE WHOLESALE TEA BUSINESS—MADAME DEMOREST INVESTS $500,000—THE STRONG-MINDED WOMEN ABOUT TO INVADE CHINA.

From the New York Sun, 11th.

The American tea trade is threatened with monopoly by a firm of ladies. Under our new regime woman has resolved she will no longer be only a tea drinker; she aspires to be a tea trader.

Madame Demorest, the Sorosian and queen fashionist, has formed a co-partnership with a lady whose name (not yet permitted to be made public) is a synonyme for practical good sense and success in large financial operations. She, like the Madame, is enthusiastic in her desire to establish a women's importing and wholesale business, employing women in all its offices and branches. She brings into the enterprise an immense capital and unbounded business experience, acquired by personal attention to her previous financial operations all over the United States.

When the combined talent of these two enterprising ladies shall be brought to bear upon the tea trade, and the interests of their sex, results of marked character may be expected. They will embark in company at an early day for London, via Liverpool. Madame Demorest will remain in London until she hears from her colleague, who will proceed direct to Canton. Here she will take up her residence among the Celestials, and become celestialized as far as possible.

She will purchase real estate in the city, and a "chop" or tea plantation in the country, and thus identify her interests with the worshippers of Confucius. Whether she will convert the Mandarins to progressive American ideas or not is to be seen. As she is a single lady, she may induce one at least to become a Christian, and give up eating rats and puppies. From her residence in Canton she, with her numerous lady agents, will make canvassing excursions all over the Celestial Empire, and in person purchase the tea from the producers themselves on their own "chops."

The teas will shipped from Canton under her superintendence, assisted by her lady officials. She will doubtless permit the rougher and sterner sex to lade the vessels that transport the precious cargoes, and man and command them. But this is by no means certain. Perhaps some "argosies of magic sail," steered by inspired sirens such as manned St. Ursula's wonderous bark, may come "dropping down with costly bale" into the port of Gotham. Madam Demorest is to be the receiver at this port, and the chief of the two large warehouses, one up and the other down town, where the teas are to be stored. She will bring her immense business experience and acquaintance to bear upon the business in America. She will direct the hundreds of young ladies who still act as canvassers and agents for the firm all over the United States, and will occasionally visit Liverpool, London and Continental ports. Her versatile genius, in the meantime, will not disdain to give an occasional impetus to her fashion emporium, which, however, will be mainly under the direction of her two accomplished sisters, the Misses Curtis, Miss Findlay still presiding in the department of art and design.

The ladies of the new tea firm express the most unbounded confidence in the success of their enterprise. They base their hopes, not only on the capital of $500,000 at their command, but also on the fact that the business is peculiarly suitable for women in all its details, and its pursuit calculated to do more than any undertaking of the period to enlarge the sphere of woman's influence, and increase her means of remunerative employment.

Frightful Accident.

A MAN TORN TO PIECES.

A horrible accident occurred in the Saxony Mills, St. Louis, on Tuesday. The accident occurred about a quarter past twelve o'clock. There were only a few men in the building, it being dinner time, and the machinery was running light, as there was not much doing in the mill. Mr. Goesel, the regular engineer, was in the building on the other side of the street, belonging to the same proprietors, and Henry Deitrich, the assistant engineer, was in charge, and was considered an experienced and careful man. About the time mentioned he was engaged in carrying out cinders, and during his absence on one of his trips the bolt controlling the "governor" either broke or slipped off. There was a heavy pressure of steam in the boiler, about 115 or 120 pounds, and the full force was immediately transferred to the cylinder. In a moment the increased speed of the machinery apprised Deitrich of what had occurred, and he hurried back toward the engine. A little delay of some kind seems to have occurred, and by the time he reached the engine, the fly-wheel had gathered a terrific speed and must have been revolving somewhere about a thousand times a minute, the whirling rush of the great body of iron and the other machinery shook the building. Dietrich it is evident understood in a moment what had occurred, and ran toward the small wheel controlling the admission of steam to the cylinder, for the purpose of shutting off steam. In his haste, and not thinking of the danger, he went directly in front of the fly wheel, and while quite close the accident occurred. The immense wheel had acquired velocity that overcame the coherency and strength of the iron, and in a moment, with a terrible sound, it flew into a thousand pieces. The force exerted by the fragments was something surprising. One large piece of the rim, weighing thousands of pounds, rushed like a ball from a cannon through the floors of the second and third stories in a curving line, tearing the wooden joists and other timber like paper, and striking the front wall of the building about the middle of the third story. This is a brick wall of unusual thickness, but the iron fragments passed clean through it, leaving an unsightly gap, and fell thundering on the South side of the street. Some smaller pieces of iron also passed through the upper floors of the building, and their effects were manifested even up to the roof. In the direction given by the revolving motion at the time of the bursting, some of the arms of the wheel struck the brick floor in front; one piece buried itself out of sight like a wedge driven in by the hand of Thor, and another stood with one end sticking out as solid as if the masonry had been built round it. To look upward from the place where the fly-wheel had been, enabled one to realize the awful force exerted. All the floors above were shivered along the course taken by the fragments, and the light of day streamed through the jagged rent in the walls. Deitrich was instantly killed, and two other men wounded.

A Terrible Adventure.

AN INVALID SHUT UP IN A ROOM WITH A MAD DOG FOR THREE HOURS.

From the Detroit Free Press, June 8th.

About two months ago, while assisting to rig out a vessel in the river, a man named Peter Demery, living on Peterboro street, in the northern outskirts of the city, stuck a rusty spike through the sole of his left foot, and has ever since been laid up by the accident, once narrowly escaping an attack of lockjaw. His family consists of wife and boy, the latter about ten years old. Sunday afternoon the mother and boy went on a visit to some friends on Gratiot road, leaving the invalid lying on a bed that stood in a "recess" in the front room. In fact there is but one room in the house, the boy occupying a lounge at night. As Demery goes about on a crutch, he had a heavy one lying on the bed when the family went away. For three years the family had owned a large cur dog, of no particular value, but kept around for the same reason that nine-tenths of the families in poor circumstances still feel that they must keep a worthless cur about to eat up the provisions that might otherwise be eaten by a child. The dog wanted to go with the boy, but was driven back, and laid down on the step. Demery states that he had read for about an hour, when his attention was attracted to the dog. The animal had walked in at the open door and stood in the centre of the room, uttering a growling, wheezing sort of noise, his eyes shining, and the hair on his back bristling up straight. He spoke sharply to the animal, who slunk under the bed, keeping up a howling, as if in pain. A window is situated near the recess and almost opposite the door, and this was up a little way at the bottom, the sash being held up by a hook. A sudden breeze coming up created a draft that slammed the door shut, and Demery and his dog were thus shut up, as it were, together. He states that the dog kept up his annoying tones until he finally spoke sharply to him, when, all at once, the brute bounded from under the bed and commenced running around the room. His eyes were full of blood, he kept snapping his jaws together like a trap, and every hair on the animal seemed to stand erect. There was no foam about the brute's jaws, but he emitted a sort of sudsy saliva that scented the room like musk. Round he went, turning over chairs, snapping at the blowing window curtain every time he passed, and each time he leaped over the cook stove, which stood just out from the wall.

Demery did not realize that he invoked any danger in speaking to the dog; he regarded the affair as arising from a desire of the dog to get out and follow the boy. So he yelled sharply at the brute, bidding him lay down. The dog just then had halted near the door, and Demery was raised up on his elbow, holding his crutch in one hand, as he had a notion to hobble over and open the door. Hardly had he spoken, when the dog bounded forward, giving a fearful howl. Instinctively the man extended the crutch, which came in contact with the dog's head, and he went rolling on the floor. When he got up it was to resume his race around the room, looking more frightful than ever. Demery sprang on the back side of the bed close to the wall, holding his crutch ready for defense, but hoping that the mad brute would not again attack him.

It was now time when Demery might expect his wife and child to return at any moment, and it suddenly occurred to him that their return would only be to meet an attack from the dog. If they ascended the steps and opened the door, as was entirely natural, the dog would bite one or both. There was no longer room to doubt that he was rabid, and that his madness was growing worse all the time. He might shout an alarm as they stood at the door, but would they understand and heed it in time?

It is but due to a sober, industrious man to state that in that moment of peril to his family and to himself, he resolved on a deed that should go down on record for future generations to read. He resolved to make that mad brute attack him, hoping in the struggle to deal him a death blow with the crutch. Carefully getting upon his knees, and securing a firm hold of his crutch, Demery yelled at the dog. The dog was tearing around the room, snarling and clashing his jaws together, and he stopped, looked up for a moment, and then sprang for the bed. He just got his claws and head upon it, when down came the crutch, and he rolled over and over. Three times was this repeated, and the fourth time the animal was stunned by the blow, and while he lay gasping on the floor the crutch was broken in pieces over his head, and he was afterward finished off with the axe. The man did not faint, nor grow pale, he dragged the body outdoors and waited for his family, who came in about half an hour, and then the carcass was buried. He yesterday hobbled down to the Central station to see if he had violated the ordinance by burying the body in his yard. It was there that, in a modest, hesitating way, he gave the above facts to our reporter.

Anecdote of Mr. Dickens.

A writer in the Cincinnati *Enquirer*, who once filled a subordinate editorial position on the *Daily News*, while that paper was under the direction of the late Mr. Dickens, relates two anecdotes of the distinguished dead that have never before appeared in print:

In the small but romantic churchyard of Bonchard, Isle of Wight, is the grave of John Sterling, a man who died young, and who had distinguished himself as one of the most powerful writers on the staff of the *Times* paper. Dickens would often accompany me to the grave of his friend, and on one occasion I remember him saying, with a peculiar and touching melancholy, "I would rather die, like John Sterling, with the greatness of heart which he possessed, and be buried in this lonely churchyard, with no tombstone to mark this spot, than to be spoken of after death as the greatest literary man in England."

Miscellaneous.

London has a "free and open church association," founded to abolish pew renting.

A Baltimore theatre manager offers as a prize a paid-up life insurance policy of $1,000 to some lucky member of his audience every night for a week.

The Emperor of Austria is forming a new cabinet—of coins and medals.

The chimney of the house in Boscawen, N. H., in which General John A. Dix was born, was taken down the other day. It measures 12 by 19 feet, and contains 50,000 bricks.

A Delaware paper, looking upon the desire for office as one of the greatest evils of the present day, calls for a general reduction of the salaries, that they may be no inducement to any one to accept them.

A letter from Newport says "the summer population is arriving in large installments daily, and Newport is getting quite gay. Two-thirds of all the cottages are occupied, and quite a rush is expected on the 15th, which seems to be the day set upon by the rest for the entering upon the occupancy of their homes. The amount of baggage landed here daily is almost incredible, and I should not dare to guess at the number of trunks I have seen accompany one family. By the way, a family of four persons from Boston brought with them twenty-six servants and nine horses, and the hackman says, "ten trunks to a body."

When the monthly Divorce Court opened in London at the end of May, there were 158 cases on the calendar.

Nearly fifty guests at the principal hotel in Los Angeles, Cal., were poisoned recently, and three employes in the hotel have been arrested on suspicion. The guests were all very sick, but fortunately no deaths occurred.

NEWSPAPER ARCHIVE®

Titusville Morning Herald.

Saturday, June 25, 1870.

Annexation of Canada.

The Union League, looking to the annexation of the Canadian Dominion to the United States, is rapidly spreading through the cities, villages and towns of our Northern neighbors. These associations embrace three classes, the Actives, who subscribe, manage affairs, and give their open support; the Sympathizers, who privately pledge their support and contributions, and the people, who give their presence at meetings, and their names and support, but who are not asked to contribute. The subscriptions are not fixed at any definite sum. The details of organization have been resolved on, and arranged with such minuteness as indicates fully the thoroughness of the means employed.

The League contains four divisions: First, towns and village associations; second, district associations; third, provisional associations; and, finally, the National League. The scheme of organization and action is believed to be perfectly practical. One year ago it was projected, but it has only been perfected since the occurrence of the late Fenian raid, which was unsuccessful in every respect, except that of throwing the whole business of that country into confusion, demonstrating the callousness of mother England to her colonial dependent, and the impossibility of maintaining a separate and independent existence from this Government without periodical disturbances, of the whole security of the Dominion, and all business relations and conditions in the provinces.

A correspondent of the New York *Tribune* has been investigating the plan and operations of this Union League to which we refer, and details the following interesting particulars. It says some time since:

"The first meeting was held in a private residence in Montreal, the plan submitted, and the organization of the first Association decided on. There were fourteen gentlemen present, all of whom pledged themselves to the movement, subscribing $100 each to the first fund. They will meet again on the 28th, after communicating with friends in eastern townships, in Quebec and throughout the city, in order to establish the first Associations. One member reported that a gentleman well known in financial circles in the city expressed his sympaty with the movement, and would contribute $1,000 toward its fund when the first $10,000 were raised. Another member present guaranteed $5,000 from his personal friends, and a third, a large property owner, offered in addition to his subscription, to give $5,000 when Canada was declared independent, and a bond for $10,000 additional when it was united to the American Republic. The friend and correspondent to whom I am indebted for these particulars says they can raise $50,000 in Montreal in three months, and hopes by Christmas to see a League with 50,000 active members and a half million of money at its command. The "platform" has not been drawn up, but may easily be imagined. This organization is better planned and better managed than the movement of 1848. This time better brains and wiser tactics are employed, and the line of policy adopted is likely to meet with a better reception. The fact that property owners compose the initial association, who look upon American union as a process whereby their property will be enhanced in value fifty per cent, affords peculiar occasion for hopes of success.

The plan of campaign contemplated by the laders will, as a primary step, embrace securing the Canadian Confederation, and then its independence. Letters from England from gentlemen in the confidence of the chiefs of the Radical party assure them that to agitate the direct transfer of Canada from England to America would be to secure a lsne of action eminently unpopular and dangerous. The partisans of the present Cabinet desire to hasten the consolidation of all British possessions in British America as a preliminary to cutting them adrift as an independent power, since the act of union would remove the plea that the colonies were a series of detached fractions, which, separated from the imperial power, would one by one fall into the jaws of Annexation. Independence being attained, and the people educated to the knowledge that union would be advantageous to themselves personally and pecuniarily, the next move will be to obtain the right of voting for the large masses, who would profit most by the the change, and also to secure immunity from coercion or unpopularity for those supporting the Union ticket.

A delegate is immediately to be sent to England to lend what aid he can to the work of securing the independence of Canada. Correspondence with several prominent politicians in the States has been opened with a view to obtaining ample reciprocity in the event of a declaration of Canadian independence, and to secure any assistance possible. The utmost attention is to be paid to all elections, municipal or parliamentary, and the support of the association, either by voice or fund, is only to be given to candidates pledged to the cause of the Union. A direct lobby is to be maintained at Ottawa.

The New Amnesty Bill.

General Butler has introduced the following general amnesty bill, agreed upon by the Reconstruction Committee. It restores to full citizenship all those who were engaged in the rebellion, with the exception of such as held high offices of honor and trust under the United States Government at the outbreak of the rebellion, or who held high office in the Confederacy during the war. Such persons as Jeff. Davis, Magruder, Lee, Breckinridge, Stephens, Toombs, and other leaders of the rebellion, who violated their oath to support the Constitution, can only be restored by special act; and this all candid men will say is just:

The bill provides for full and general grace, amnesty and oblivion of certain wrongful acts, doings or omissions of all persons engaged in the war of the late rebellion perpetrated, incurred or forfeited between the 11th of April, 1861, and the 20th of August, 1866, with full restoration of all rights and privileges lost or injured thereby and therein.

The following classes of persons and the rights, titles and causes of action are excepted from all the provisions of this act, and none other:

First—Whoever, having been educated at the Military Academy at West Point, or at the Naval Acadamy at Annapolis, who shall have engaged in the rebellion or insurrection against the United States, or given aid to enemies thereof.

Second—Whoever, having been a member of either house of Congress of the United States, who shall have engaged in rebellion against, or given aid, comfort or countenance to enemies thereof, and whoever was a member of the so-called Confederate Congress.

Third—Whoever shall have held office at the head of one of the executive departments of the Government of the United States, or minister plenipotentiary or minister resident, or judge of any court under the United States, and shall have engaged in the rebellion or insurrection against the same, or given aid or comfort to the enemies thereof, and whoever shall have held either of like offices in the Confederate States.

Fourth—Whoever shall have voted for or signed any ordinance of secession of any State, or held the office of Governor of such State while the same was in rebellion.

Fifth—Whoever, while in the service of the so-called Confederate States, treated with cruelty or otherwise than according to the usages of war, any prisoners of war held by authority of the so-called Confederate States.

Sixth—Whoever, having the charge and custody of public money of the United States entrusted to them between said States, have not duly accounted for and paid over the same, and whoever shall have embezzled or secreted public stores, public goods, chattels, money, provisions for military, and property of the United States.

Seventh—All deserters from the army or navy of the United States, and all bounty jumpers.

Eighth—All property and rights of property acquired by any levy, judgment or extent made and executed upon any lands or tenements, goods or chattels, or any available thing whatever, and any sale or forfeiture by confiscation or taxation, whereby any rights or titles have become vested either in the United States or in a third person.

Ninth—Every piece and parcel of land, however it may be described or bounded, which now is or was used as a National Cemetery, in which the bodies of soldiers of the United States are interred, or which is in occupation of the United States for the purpose of a cemetery, such parcels of land are hereby declared the property of the United States in fee by capture in war, and forever dedicated to uses and purposes of cemeteries for soldiers of the United States heretofore entered therein, and to be under the sole jurisdiction of the United States for such purposes, inalienable forever. Provided, that nothing herein contained shall affect or impair the validity of any act of Congress removing political disabilities of any person herein exempted from the effects of the provisions of this act.

This act of amnesty and oblivion shall extend to all acts or omissions made or done, or omitted to be done by any officer or soldier, or other agent of the United States in carrying out or putting into execution laws of the United States known as the reconstruction act, and other acts for the government of the rebellious States, however the same may be entitled fully to extent and benefit, and to the same extent as if said acts or omissions had been done or omitted to be done by such officers and soldiers during the war of the rebellion.

ASSOCIATED PRESS REPORTS

By the Western Union Line.

NEWS BY CABLE.

LONDON, June 24.

Dispatches from various parts of the country report light showers last evening, and crops greatly improved.

Congratulations by telegram to and from President Grant were received amid much enthusiasm at the banquet held in this city last evening, in honor of the completion of the telegraph line to India.

The cable across St. George's Channel to Wexford, Ireland, has been repaired. The Wexford cable contains four conducting wires, while other cables to Ireland containing only one conducting wire are further north, making necessary frequent repeating stations. Now, however, communication is perfect in all directions.

STUTTGARDT, June 24.

The Emperor of Russia is here on a visit.

LIMERICK, June 24.

The police yesterday found a quantity of loaded bombs in an unoccupied house. The owner of the premises was arrested.

AMSTERDAM, June 24.

The Bank of Holland has reduced its rate of discount to 3 per cent.

LONDON,, June 24.

Ashbury's yacht Cambria left Cowes today for Queenstown, the starting point for the trans-oceanic race with the Sappho, on the 4th of July.

MADRID, June 24.

The Spanish government proposes to consolidate all its loans.

LISBON, June 24.

The regular mail steamer from Rio Janeiro has arrived. The treaty between the allies and the Paraguayan government had not yet been signed. A bill was recently introduced into the Brazil Chamber for the abolition of slavery. It makes free all children of slaves born after the passage of this act.

QUEENSTOWN, June 24.

The steamship Java, from New York for Liverpool, has arrived.

General News.

NEW YORK, June 24.

Two professors and ten students of Cornel University sailed from this city yesterday afternoon in the steamer North America, for Brazil, where they will spend six months in scietific explorations. The expedition is composed of Chas. Fred't Hartt, Professor of Geology, as director, and A. N. Prentis, Professor of Science, assistant director, with the following named as special students of science: Horace Kendall, Sec'y; Q. B. Comstock, stenographer: H. H. Smith, geologist; R. B. Wilbert, C. S. Powers, O. A. Derbey, P. P. Stanton, McDonald and P. M. Johnson. Mr. Ralph Eldredge, of Boston, also accompanied the class as a volunteer student. Prof. Hartt will enter Brazil at Para, and continue his investigations and survey of the country from the head of the Amazon to Pernambuca. It is his intention also to make a careful survey of the coast for improvement of commere.

The persons connected with the recent case of men who went about London in women's clothes have died suddenly. A correspondent states the circumstances indicate that poison had been called in to baffle justice. It is generally believed by Lord Arthur Clinton's friends that he has completed the tale of his misdeeds by the committal of suicide.

The report that an indictment has been found against Bailey, defaulting Revenue Collector, by the United States Grand Jury, is denied at District Attorney Pierrepont's office.

The quarantine troubles are still exciting the attention of shippers of coffee and sugars, but a hope is entertained that the difficulties will be adjusted by Saturday, when it is expected that the Quarantine Commissioners will meet to adjust the rates.

The President yesterday signed the bill creating the Department of Justice. This takes from the Treasury, Navy, and State departments their solicitors and their clerks and the employees in their offices. Also that of the Revenue Bureau and places them under the Attorney General. Its approval caused a great flutter among the employees of bureaus to be transferred to the new department. It is understood that Solicitor Banfield will resign and accept the place of Assistant Secretary of the Treasury.

Texas Legislature.

GALVESTON, June 24.

The Senate passed the House militia bill—15 to 5—the previous vote. Thirteen of the Conservative Senators bolted, and were brought back by the sergeant-at-arms, and five of them were released to make a quorum and then the bill passed. Eight Senators are still under arrest. Great indignation is expressed the bill and at the manner of its passage. A newspaper correspondent has been expelled for calling the wife of Gov. Davis and other females lobbyists. The bill giving the Governor power to appoint all civil officers, and another to organize State police, of which the Governor will have the appointment, will doubtless pass.

Delegate to England.

OTTAWA, June 24.

The Hon. A. Campbell, delegate to England, has power to demand from the Imperial Government all indemnity for the late Fenian raid and ample protection against future ones. It is also stated he is to impress the importance of aiding in the construction of a railroad to the Pacific.

CONGRESSIONAL PROCEEDINGS.

Senate.

WASHINGTON, June 24.

Mr. Wilson reported with amendments the army appropriation bill. Also a bill for the relief of the National Homestead at Gettysburg, for orphans of soldiers and sailors.

Mr. Sumner reported a joint resolution directing return to the government of China of the unappropriated surplus of $400,000 currency, being part of the sum received from that country for settlement of claims of Americans under the convention of 1858.

Mr. Pratt introduced a bill to dissolve the tribal relations of the Miami Indians after four years, and for other purposes. Referred.

A bill was passed authorizing the $40,000 appropriation in 1870 for the survey of the Isthmus of Darien to be expended under direction of the War or Navy Departments at the discretion of the President.

Mr. Morrill, of Vt., from the Committee on Finance, reported favorably the bill to require national banks going into liquidation to retire their circulating notes.

The Senate resumed consideration of the tax tariff bill, when the sections to continue the income tax were stricken out—yeas 34, nays 23.

Sherman asked a vote upon the sections containing the income tax on dividends and corporations, but subsequently asked to have the bill postponed till Monday next to give the Finance Committee opportunity to consult the loss of revenue involved in rejection of the income tax, which would have to be made up by restoration of other taxes. He thought it also necessitated the voting down of the tariff part. He was apprehensive of the final defeat of the bill in consequence of the vote just taken, the House having passed the modified income tax provision by a vote of 3 to 1, and it would not be likely in any event to agree to its total abrogation.

Conkling, from what he had been told by members of the House, felt confident the decision of the Senate on the question would not be seriously opposed in the House.

Williams and others favored the striking out of tariff sections and substitution of a limited free list, which appeared to meet with general favor. The general merits of the bill were discussed upon Sherman's motion to postpone, which finally prevailed, and at three o'clock the naval appropriation bill was taken up.

The amendments reported from the Naval Committee were agreed to. They regulate the pay and allowances and retirement and promotion of officers, fix the number in each grade, etc. The bill was then reported to the Senate from the Committee of the Whole.

Mr. Harlan introduced a bill for additional representation in the Forty-second Congress. It provides that in any State in which the representative population of the 9th census shall exceed by 150,000 or more that of the preceeding census, there may be one additional representative in the Forty-second Congress for each 150,000 of such excess, and for such fraction thereof exceeding 150,000. The States are to be notified as to the additional number as soon as the census returns are in, and unless otherwise directed by a State such representative shall be elected on a general ticket.

The Senate, after an executive session, took a recess.

House.

Consideration of the Georgia bill was resumed, discussion lasting till 3 o'clock, when the House proceeded to vote on the bill and amendments. The bill now stands as follows, without preamble:

Section 1. Be it enacted, That the State of Georgia, having complied with the reconstruction acts and fourteenth and fifteenth articles of the amendments to the Constitution of the United States, having been ratified in good faith by a legal legislature of said State, it is hereby declared that the State of Georgia is entitled to representation in the Congress of the United States: but nothing in this act contained shall be construed to deprive the people of Georgia of the right to an election for members of General Assembly of said State, as provided for in the constitution of said State.

Section 2. That so much of the act entitled "an act making appropriations for the support of the army for the year ending June 30, 1868, and for other purposes," approved March 2, 1867, as prohibits the organization of the arming or calling into service of the militia forces in the States of Georgia, Mississippi, Texas, and Virginia, and the same is hereby repealed.

Quite an episode occurred between Randall and Butler. The former charged the latter with going to the Globe office and procuring the omission of certain words of a personal nature from his (Randall's) remarks a few days since. The subject was referred to the Committee on Rules.

The Speaker announced Garfield and Jones, of Ky., and Sheldon, of La., the Committee of Conference on the currency bill.

A large number of pension bills were reported and acted upon.

Adjourned.

Y. M. C. A. Convention.

INDIANAPOLIS, June 24.

The convention was called to order at 9 a. m. After devotional exercises and reading of minutes, several resolutions and communications were presented and referred.

A resolution for the appointment of a week of prayer elicited considerable discussion, and it was finally decided to recommend a particular week when other arrangements were favorable to pastors and churches.

A resolution was discussed and adopted in effect that measures be taken by this convention to secure permission from various railroads to attach to each passenger coach such boxes as may be appropriate in which to deposit suitable religious reading matter.

The next question under consideration was a resolution, offered by H. P. Lloyd, of Cincinnati, recommending to the Association the organization of a Layman's Institute, in which young men may receive practical instructions in regard to the best manner of conducting religious meetings and of presenting the truth.

Dr. Moore, of Cincinnati, led the discussion in favor of the proposition, followed by the Rev. Mr. Spaulding and others, occupying a large part of the morning session. On the final vote the resolution was lost.

The next subject was the best method of securing Association buildings. The discussion was opened by Mr. Davis, of Vt., and continued by Mr. Darnell, of Ill., Mr. Moody, of Chicago, and others up to the hour of adjournment.

Washington News.

WASHINGTON, June 24.

Efforts are making with Senators to prevent the admission of Gov. Stevenson to the Senate, from Kentucky, in place of McCreery, next March. Documents containing charges against Stevenson have already been filed with a radical Western Senator, and there are many charges which have not yet been placed in form If the charges prove to be well sustained his admission will be very doubtful. Among other charges made is one that he was in Richmond when the war broke out, and a spectator on the rebel side at the battle of Bull Run, and that when he returned to Kentucky he took with him a Colonel's commission from Jeff. Davis, with an understanding that he was to raise a regiment for the rebel army, but he subsequently abandoned the project.

The commission of Col. Akerman, Attorney General, will not be issued for several days. His friends say they have reasons to believe he will not qualify for a month to come, until which time Judge Hoar will continue to discharge the duties of the office. At the Cabinet meeting to-day the Attorney General was represented by Judge Field. Mr. Ackerman, by invitation from the President, called during the session and was personally introduced to members of the Cabinet present. He took no part in the proceedings, however.

The Secretary of the Treasury has directed the payment of the July interest on and after the 28th inst., without rebate.

Fenians Indicted.

CANANDAIGUA, N. Y., June 14.

The United States Grand Jury has presented indictments against the Fenian raiders Starr, of Louisville, Ky., Thompson, of Albany, and Mannix, of Malone, separately, and one against Thompson and Starr jointly. Starr will be tried on Monday.

Soldiers' Monument.

PROVIDENCE, June 24.

The corner stone of the Rhode Island soldiers' and sailors' monument was laid this afternoon by the Free Masons, in pursuance of an invitation of the General Assembly. The entire Masonic body of the State was in line.

Convicted of Murder.

CINCINNATI, June 24.

The jury to-day brought in a verdict of murder in the second degree against Jeremiah Lynch for the murder of private watchman Sears, last April.

Mail Agent Arrested.

BALTIMORE, June 24.

Andrew Stafford, mail agent between Baltimore and Philadelphia, was arrested yesterday for robbing the mails. He admitted his guilt and was committed to wait the action of the grand jury.

The Railroad War.

ALBANY, June 14.

It is stated the Central Railroad to-day took cattle at Buffalo, deliverable here, at one dollar per car, and sheep and hogs at the same rate as last week—$40 per car.

AMUSEMENTS.

PETROLEUM MARKETS.

OFFICE OF THE MORNING HERALD, TITUSVILLE, June 24, 1870—8 P. M.

There was no perceptible decline in the prices upon the creek to-day, and the market may be quoted at a stand still though a shade weaker feeling was perceptible, and in some instances the bids of buyers at a decline of fine cents from those yesterday.

Upon the Lower creek $3.90 and $4.00 was bid, the latter principally for the better qualities of oil, $4.05 was the price generally asked in this locality. Upon the Upper Creek $3.85 was the best offer made, and sales were made at this figure, though $3.80 only was offered by several parties Outside markets are quoted as quiet and unchanged.

Pittsburgh Oil Market.

PITTSBURGH, June 24.

Crude—Market dull at 11½c for spot or June delivery; no sales.

Refined—Market flat, nightsky flabby; dealers generally endeavoring to keep cool. We quote spot at 26¾; July 26¾; August 26¾c; September and October 27¼c; buyers option all the year 28c. The only sales we have to report were 300 bbls for September at 27¼c, and 500 for October at 27½c.

New York Oil Market.

NEW YORK, June 24—10 A. M.

Crude—Bulk not inquired for in full parcels; 14c is the quotation.

Refined—Little more doing, no general activity; price easier and unsettled; sales 300 bbls S. W. this month at 26½c; 6,000, 26¼c, 1,500 each month from July to September 27c; 2,500 July to November, private terms.

Philadelphia delivery market dull and slight decline; 1,000 bbls refined S. W. sold for June delivery at 66½c, delivery on creek 1,000 at 3.95 for upper, and 4.10 for lower; 5,000 Oil City 1.40.

NEW YORK, June 24—12:05 A. M.

Market unchanged in every respect.

NEW YORK, June 24—3:15 P. M.

Market dull and unchanged: July 26¾c.

Philadelphia Oil Market.

PHILADELPHIA, June 24.

Market quiet and steady: P. L. S. to W., 26c; S. W., 26½c; Crude 12¼@13½c.

Antwerp Petroleum Market.

ANTWERP, June 24.

Market quiet but steady at 52¾f.

Cleveland Oil Market.

CLEVELAND, June 24.

Petroleum market depressed and lower; Crude $3.10@3.15 ⅌ bbl.

Refined nominally 23c ⅌ gal; nothing doing.

Cleveland Produce Market.

CLEVELAND, June 24

Flour firm and tendency of prices upward.

Wheat firm and an advance of 1@2c: No 1 red 1.32; No 2 do 1.28.

Corn quiet and nominal.

Oats firmer at 66@67c for No 1 State.

Rye quiet and unchanged.

Barley, nothing doing.

Toledo Produce Market.

TOLEDO, June 24.

Flour quiet.

Wheat 3@5c lower; No 2 white Wabash, 1.56; No 3 do 1.48; regular white michigan 1.49; amber do 1.42; No 1 red 1.35, now offered at 1.32; No 2 do 1.27½; No 3 do 1.17.

Corn 1c lower and dull; No 1 90c; No 2 nominal.

Oats dull and shade lower, No 1 37c; No 2 31c.

Chicago Produce Market.

CHICAGO, June 24.

Flour dull and unchanged.

Wheat weak: 4@4½c lower; 1 11½@1.15 cash; 1.13½@1.13¾ seller July; closing at 1.11¾@1.12 cash, and 1.13¾@1.14 seller July; this afternoon active and irregular; 1.12@1.12½ cash; 1 15@1.15¼ seller July.

Corn opened firm, closed easier at 81¾@81⅞c for No 2 and 74⅝ for rejected: this afternoon steady and unchanged.

Oats firm closing and 52@52½ for No 2.

Rye fairly active and firm, closing at 85c No 2.

Barley inactive and nominal.

Hogs dull and 10c lower at 8.02@8.70 for common to choice.

Cattle dull: 3.75@9.00 for Texan steers to extra shipping beeves.

Cincinnati Produce Market.

CINCINNATI, June 24

Flour dull and unchanged; superfine 5 00@5.25; extra 5.50@5.75 and family 5.75@6.50.

Wheat dull and nominal; red held at 1 20@1.25.

Corn dull and neglected: it was offered at 85c; no demand.

Oats dull at 55@55c.

Rye unchanged.

Cotton dull and nominal; middling can be bought at 20c.

Tobacco in fair demand: sales 220 hhds at 5.20 to 6.50; the latter rate for bright taney leaf.

Whisky unsettled and nominal, sold at 98c in former, but closed nominal and nimsky.

Mess pork dull and lower; sales at 22.75.

Bulk meats quiet; held at 11½c and 1.11¾ for shoulders and sides; no sales.

Bacon nominally unchanged; shoulders held at 13c; sides 10¾@12¾ for clear rib and clear sides.

Lard held at 16c.

Sugar cured hams 21¾@22c.

Linseed oil 1.10.

Lard oil 1.12@1.15 and dull.

Butter dull at 16@18c ⅌ lb.

Eggs dull at 14@15c.

New York Produce Market.

NEW YORK, June 24.

Cotton heavy, lower; 669 bales at 21c for middling uplands.

Flour closed dull, 5c lower.

Wheat dull and heavy: 1.30@1.31 for No 2 Milwaukee and 1.45@1.46 for winter red and amber western.

Rye dull at 96@98c for western.

Oats heavy at 61@63½c for western, and 67@69½c for Ohio.

Corn dull; 93c@1.00 new mixed.

Pork lifeless with sellers.

Mess for August, 29.00

Beef quiet and unchanged.

Cut meats quiet and steady.

Bacon nominal

Lard dull and slightly in buyer's favor.

Eggs dull and heavy at 21@22c

Philadelphia Market.

PHILADELPHIA, June 24.

Flour good demand and firm; extra family 5.75@7.18.

Wheat steady and prices looking up: Pennsylvania red 1.48@1.54; Indiana 1.50.

Rye steady 1.10.

Corn in fair demand and unchanged.

Oats steady.

Provisions small business.

Whisky nominal: western iron bound 1.05.

Baltimore Market.

BALTIMORE, June 24.

Flour dull and unchanged.

Wheat steady; Maryland 1.60@1.75; Pennsylvania 1.50@1.52.

Corn quiet; white 1.18@1.20; yellow 1.10@1.12.

Oats lower: light 65c: heavy 60@65c.

Rye 1.05@1.06.

Provisions unchanged.

Whisky very dull at 1.01@1.02.

New York Dry Goods Market.

NEW YORK, June 24.

The feature to-day is a material reduction by agents in prices in the following goods: Stark A heavy brown sheetings to 12½c: Amoskeag A do 13½c; do B do 13c; Ozark do 13c: Massabasic brown drills 13½c; Stark H do 13½c; Amoskeag corset Jeans 12c; do Cambrics 8c. As above goods are well known brands and are in the hands of a strong firm this decline has surprised many in the trade. Cabot A reduced to 13c by a leading jobber. In other makes of goods no important change as yet.

Money and Stock Market.

NEW YORK, June 24.

Wall street dull, money 3@5 ⅌ cent on call.

Sterling dull and heavy at 9¼@9½.

Gold dull, lower and weak; opened at 111¾, closed at 111¼@111½.

Borrowing rate 1-61 to flat.

Carrying rates 1@2 ⅌ cent.

Clearances $71,000,000.

Governments dull and weak.

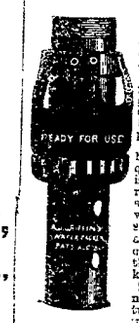
Griffin's Patent Water Pipe Packer.

PATENT STEEL JARS.

The undersigned hereby give notice to manufacturers and parties making, selling or using Drilling Jars made of wrought iron or steel combined, that by virtue of certain instruments duly recorded at the United States Patent Office, we own the sole and absolute right, title and interest in three patents for Drilling Jars; one granted to James C. Eastman, in July, 1867, and two to Edward Guilford, in May, 1868; said patents covering all Jars made of wrought iron and steel combined, and applied substantially in the manner represented in said patents and generally known as steel jars.

Griffin's Patent

WATER PACKER!



This is one of the most useful Patents for oil operators ever invented. It has several advantages over any other Seed Bag or water packer in use 1st. It can be put down quicker and is instantly ready for use as there is no waiting for seed to swell, and by its quick action the well is kept clean. 2d. It can never freeze tubing or casing in use so that it cannot be taken out readily.

Every other Packer in Use has Fastened Strings of Tobacco and Casing, so they cannot be Drawn From the Well.

3d. It is so constructed by means of a left hand screw thread that it can be loosened in a few minutes and removed from the well without difficulty. Even the caving in of the rock above the Packer will not prevent the casing being drawing out readily. It can be taken out and put back without repairs.

4th. This is the only Water Packer in use that has a Patent on, all others being an infringement upon the rights secured by letters Patent granted by the United States to Anson D. Griffin, August 15th, 1867. The Packer is now offered to the public at the low price of Twelve Dollars each, and the money will be refunded by us or our agents to all parties buying them where they do not give entire satisfaction.

TO OIL OPERATORS.

TORPEDOES!

THE ROBERTS'

PETROLEUM

TORPEDO COMPANY

Office at the

Red Plaining Mill.

Corner of Pine and Second Sts.

(Near the Railroad.)

Titusville, Pa.

Owing to the large and increasing demand for the Roberts' Torpedoes, and the late decision of the Commissioner of Patents in refusing to Wm. Reed a patent, and the decision of Judge R. C. Grier sustaining the Roberts' patent they have LOWERED the price of their Torpedoes

Twenty per Cent,

so that every Operator can afford to try the Torpedo before abandoning a Well.

The following is the decision rendered by Judge Grier on the twenty-second (22d) day of September, 1869, in the United States Circuit Court at Philadelphia. The case was argued three days by Charles M. Keller of New York, B. F. Lucas and S. A. Purviance of Pittsburgh, for defendants, and George Harding of Philadelphia, and George H. Christy, of Pittsburgh, for plaintiff.

OPINION OF JUDGE GRIER.

As I write with difficulty I can only state the conclusions to which my mind has come after a careful examination of this case.

The complainant has exhibited a patent dated 25th April, 1865. This is prima facie evidence of a good title, and puts on the respondents the burthen of proof that the patent is void or worthless.

I need not repeat my remarks in the case of Goodyear vs. Day (2 Wall, C. C. Rep; 290), but now adopt them as affording a rule of decision which applies clearly to the present case.

As the infringement of the patent is admitted, the only question will be as to the validity of complainant's patent of April 25, 1865.

"It was after speculation had been reduced to practice," and after repeated experiments, that the complainant succeeded in overcoming the prejudice and ignorance of the people on the subject, and persuading the public that his invention was useful; after he had established its great utility and value, and "when his genius and patient perseverance, in spite of sneers and scoffs," were completely successful, that Reed, who had before made experiments on the same subject, and was wholly unsuccessful, imagined that he had the best right to the invention, and after purchasing one or more of complainant's torpedoes, he applied on the 1st of November, 1867, for a patent for substantially the same combination of devices or machines contained in complainant's patent. On the 15th of the same month the respondents formed themselves into a company or corporation called "The Reed Torpedo Company," for the purpose of pirating the complainant's invention and supporting the expense of litigation, and thus defraud him of its fruits. They have persevered, even after the preliminary injunction very properly granted by the District Judge.

Let a decree be entered for complainant for a perpetual injunction, and a Master appointed to take an account according to the prayer of the bill.

R. C. GRIER, Circuit Judge.

NOTE—The passage referred to by Judge Grier in his former decision, 2 Wallace, p. 290, adopted, as applicable to this case, was as follows:

"It is usually the case, when any valuable discovery is made, or any new machine of great utility has been invented, that the attention of the public has been turned to that subject previously, and that many persons have been making researches and experiments. Philosophers and mechanicians

A Disclaimer.

Several prominent oil producers have called upon us to say that they have no sympathy or concurrence with the circular issued by a few operators and their employees down the creek in the interest of Mr Delemater They consider it a shabby trick of a few sore headed politicians to vent their personal resentment against Mr Anderson The oil producer as a class had no lot or part in the undertaking

CUCUMBERS, Squashes, New Potatoes Ripe Onions, and all kinds of vegetables at Shank's.

Delemater Peddling the Gazette.

STEUBEN TP., June 24, 1870

Editor Morning Herald

Mr Delemater came to a "raising" out here on Thursday and made two votes for Mr Anderson by distributing copies of the Pittsburgh *Gazette* among the crowd The people began to think that when a candidate for office hires a Pittsburgh editor to defame his opponent and then travels through the county and circulates the libel with his own hand, such a man is unfit to represent the honor the dignity and the decency of old Crawford in the State Senate At least two men who had said they should vote for Delemater on the score of old acquaintance, have come to a right about face, and intend to vote for Anderson EASTERN CRAWFORD

Our Home Interest.

Editors Morning Herald

A circular, evidently issued by the Oil Producers is widely circulated throughout the oil region and although unaccompanied by any explanatory circular, its effect is generally acquiesced in, is so apparent to all that it meets general approval It has long been evident to all of our people who dread the return of the times of '67, when its widespread disaster to all our local interests that the question of production required careful consideration The prices of 67 though ruinous to every interest here, had the effect to thoroughly introduce our staple to the civilized world and so deeply had its use become interwoven Th demand for it since has increased and is increasing steadily though slowly and under the prices now obtained branches of our home industry have flourished During 1870 this favorable condition of affairs had been warranted and hence evident that a general stinting in production and consequent appreciation of its value It is simply the application of the law of supply and demand the law that regulates all commercial values The search for new fields of operation and the development of the old has been stimulated out of this condition—unhealthy because credit based upon the probabilities of success has been unlimited and when values fall to an unremunerative figure the results is certain as far as the whole community is concerned This circular referred to would seem to convey the idea that they had already or were about to do all that ought not to be and difficult matter to determine The daily production June 1 1870 was reported to your Reporter 4160 barrels worth June 23 $6 50 per barrel and 3 5 June 1 1869 the daily production was 11 334 barrel worth June 23 at $3 per barrel $33 670 So we are now furnishing daily 2 500 barrels more of oil for 2 100 less dollars Has the consumption correspondingly increased it is in it be on a further increase of production and can it be produced profitably Yours and the Association report show that the average number of producing wells since June 1 1870 is 2 120 averaging two six barrels per day each

The average number of wells drilling is 423 and the average number of wells commenced and necessary to maintain the above number of pumping and drilling wells is 143 per month This makes the average life of an wells commenced about 900 days each at above average producing 2 500 bbl which to pay royalty average at one quarter to pay running expenses for the 400 days of life of the well and to pay the cost of the well over and above the remaining value of it machinery

If these figures and conclusions are truthful each the average of operators profit is produced oil a profit per barrel at the wells It not how is all the value be restored so that to all classes of our community the production shall be a steady source of wealth? The question demands of all a grave consideration It is the misfortune of this branch of industry that material essentials are purchasable rare but those who follow it as a business must learn that it like all other pursuits of the masses is governed by law and not by luck LAND INTEREST

DR HAVEN'S LECTURE—Dr Haven's lecture last evening was an excellent one full of good sense vigorous in style, and replete with practical suggestions The point was utterly opposed to the present theory or practice of making education chiefly consist in the study of words instead of study of things The latter was the Greek method Their youth devoted their minds to the book of nature and had thus produced the unparalleled Greek literature The speaker severely condemned corporal punishment in schools as degrading both mind and brutalizing to the nature The law of kindness should be the rule for family and school government, being adapted to the rational and emotional part of man He believed that and severity to children was the fruitful cause of the crimes that infested and desolated human society The allusion touched upon the bearing and importance of correct early associations and the influence of manner upon children and the stir up on manners The audience was small People will not go to hear this sultry weather except to dance all night or listen to negro minstrelsy But such lectures as this should be free If meritorious the people will gladly subscribe to defray all expenses Dr Haven would accomplish much good by addressing the pupils in the public schools upon a subject to which he has given a good deal of thought and attention

A DREAM OF SUMMER.

The winds blow in from southern seas,
Fragrant with spices they have kissed,
Beneath a sapphire-tinted sky,
In flowery vales of Italy,
And all the woods stand in a soft green mist

Across the blue the sailing clouds
Float by like sea birds lazily
Spreading their white wings to the breeze,
That sings of southern lands and seas
While all the happy days go swiftly by

I lie a day to rest from toil
To lie upon the grass and dream
To bid life's beating pulses stay
Through all the hours of one bright day
Beside the murmur of the falling stream

A day to cease from weariness
To let the busy world go by
And lay like a while to rest
Beside the clear stream's silver breast
Dipped in the splendor of the sunlit sky

From Titusville to Du Luth.

DU LUTH MINN, June 14 1870

Editor Morning Herald

While waiting a boat for below, I will give you a little of the history of Du Luth and incidents of the trip from Cleveland We left the latter place on the 23d of May on the 'Keweenaw' Captain, Stewart stopping at Detroit Port Huron Sault St Marie canal at the entrance to Lake Superior, arriving at Marquette Friday where we took to land stopping at the North West Hotel quite a resort for summer tourists At Negaunee about 13 miles distant from Marquette you reach the iron mines there being about fifteen in a radius of six miles are to the amount of 1 000 000 tons will be shipped from the mines during the season of 1870 It is supposed by some to Marquette and Escanaba where it is taken by vessels below Ft Wilkinson on Lake Michigan The roads run over a perfect corduroy from far to six hours and tons cost per day at cost of from $1 25 to $1 50 per ton Vessels of 1 500 tons have to go to Escanaba to reach the ports of Michigan into Lake Michigan The people of the upper Peninsula have been asking for an appropriation from Congress to clear the Sault (Lake) Canal to enable them to get their ore from Marquette to Lake Superior and I not come in the appropriations recently vetoed by the committee in Congress the Michigan is to have $150 000 for her relief in contemplating the canal Apropos to this we saw at the Sault quite an encampment of Red Coats of the Queen's own waiting transportation to Red River through the canal but our government at that time was considering the matter whether to let them pass or not We made a stay of two weeks at Marquette and vicinity and on the arrival of the Keweenaw again from below we took passage for this place It one is not in a hurry is quite pleasant recreation this way The Captain is always willing to stop half an hour for you to look around if their regular stay is not long enough

We stopped between Marquette and here at Houghton Hancock Eagle Harbor Eagle River Copper Harbor and Ontonagon in the copper region We arrived at Duluth on Sunday morning time from Cleveland Duluth all seven days

Duluth is at the west end of Lake Superior in appearance is rather poor as appears as you approach from the water from the fact that for miles on each side of the lake you see nothing but a dense forest and in places of this or west on a hill from the lake like to the more of its Duluth less than a year old buildings all new of course and most of them unpainted and none of metropolitan proportions having nearly five hundred building of all classes and representing all trades and professions

The forests filled each city to accommodate its rapid growth Lots 50x150 sell readily for from $100 to $150 per foot while less than a year ago the same were slow sale for $10 to $20 for 100 This is the terminus of the Lake Superior and Minnesota and Northern Pacific railroad The former connecting at St Paul 150 miles distant and will be completed in about six weeks the latter road runs to Red River and Northwest People wishing can make this place some four days sooner when the Lake Superior road is completed than at present by boat The contract for building the Northern Pacific railroad has quite recently been let and to be commenced immediately for Red River 230 miles

The two railroad companies in conjunction are making improvements in the harbor on a large and substantial scale in the way of docks grain elevator &c They will have completed during the coming season over a mile of docks They expect to make this the grand outlet for the West and Northwest being only about forty miles farther from Buffalo than Chicago by water and only 100 miles from St Paul The latter place being 600 miles from Chicago

Superior City about 7 miles distant was born about fifteen years ago with great expectations and its fond parents hoped by this time to see in it a strong rival for Chicago but it and Cause want of nourishing from a railroad which alone could give it permanent existence To-day its citizens look across the bay at Duluth and bewail their sad fate

Jay Cooke is the paternal parent of this place to his front or all improvements and Duluth owes to recommend to all who employ men and commit tedious For instance I saw on my way up a professional gambler have a letter from him saying for him as usual that the bearer was an intimate friend of his (Jay Cooke) &c &c

I met people coming here who were disappointed of coming expecting to find money hanging from every low branches and the inhabitants have a Dogs mid barism—in a condition to begin to build with all well and ready to make a transfer of their town lots for a string of beads Such were disappointed A night of the pill box came upon the boat with usual mewhat under this impression with his mothers bles in and a good stock of physic expecting to find every one sick but a Doctor and dreams of large amounts of money for small amounts of physic were as constant companions the long way up The result was he could have been unjointed in about four minutes and sent home in eight boxes but at least half a dozen as good surgeons and physicians as could be found He went back on the next boat and will say Duluth is a humbug

I met a familiar face in Clinton Markle Esq real estate dealer He was a successful oil operator on the creek but owning some land here since 1867 he came up to pocket the greenbacks for it at the rate of $5 000 per lot. He was the first to build here and may be considered a pioneer He is always ready to show strangers the city and good corner lots I understand one of your townsmen, Mr H B Porter, commenced boring last summer when he was here in the way of some investments in real estate I think he has a good show, and can prepare to build tanks now very soon

A trip to Agate Bay could be made both pleasant and instructive It is about 20 miles up the North Shore The thermometer stand about 60 most of the time

I forgot to mention quite an important fact in connection with this city, and that is the completion last week of a theatre a very cosmopolitan structure all on the ground floor The troupe consists (as per bill) of McFarland and wife Jessie McFarland, Mattie McFarland, the wife of Mr McFarland, Frank McFarland and John McFarland the old man again making six on the bill and four in the family, all stars on leaving the Bay View House (the hotel) for the scene of conflict They presented quite a picturesque appearance The young star Jessie McFarland advance guard with a bundle of old clothes and a wash pitcher the balance of the stars bringing up the rear with sundry old clothes some 1776 muskets and wooden swords the male stars kindly helping the female stars over the logs to the entrance of the theatre We have plenty of trout much musquito and big mugun SNIDER

Will Petroleum Hold Out?

The question whether petroleum will hold out to the end of the chapter is one of curious speculation always interesting and to occupy the solution of which the mind property of this nation may at some future time depend We are not on that one of futures or Gold exists upon which Science may so cast the mantle And none of our wise old men seem willing to look at the problem from a practical standpoint and report that the petroleum will be necessarily to the commercial world upon the illuminator or fuel or lubricator Providence will continue to yield and supply this product and that when it can be manufactured more cheaply from some other substance than the days of petroleum will be numbered But there are many minds that are nothing if not speculative that are ever on the range of investigation Such will always idealize the line of discoveries in the material world The facts and opinions of these scientists are worth consideration but every one will draw conclusions for himself as to the exhaustibility or non exhaustibility of petroleum

In entering this question it seems to be necessary to keep in mind the most ancient of history of the origin of petroleum T Oldham Esq Superintendent of the Geological Survey of India thinks petroleum from the oil wells along the Irrawaddy river in Burma to which he has given much attention, is produced by *chemical changes in the vegetable matter embedded in the rocks* Prof Silliman of Yale College in his elaborate report on his careful and extended examination and analysis of the petroleum in Venango county sent by Messrs Eveleth & Bissel in 1860 says "From the geological position of the rocks furnishing this natural product in the coal measures but it is by no means confined to this group of rocks since it has been found in deposits much more recent and also in those that are older but in whatever deposits it may occur it is uniformly regarded as *a product of vegetable decomposition* Whether this decomposition has been effected by fermentation only or by the aid of an elevated temperature and distilled by heated vapor or perhaps hardly settled

A writer in the *Educational Monthly* (see *Union Free Press* 26 Oct 69) after reviewing various theories respecting the origin of petroleum says — We may conclude that in the earlier geological formations the oil resulted from *animal* and in the latter from *vegetable accompost on*

Prof Lesley says — The fact is every formation which has been originally replete with *fossil life animal* and *vegetable* has been a reservoir of petroleum and every such formation when tilted to a level above the valley beds has lost its petroleum by evaporation and percolation but every such formation where it has remained deep buried beneath the present surface drained and covered by other city formations has retained its petroleum in its original bed, loose sands and vertical fissures and the more of it in proportion to its depth and to its gravelly massive and fissured character

Sir Humble and learned writer of a treaties on petroleum in one of the former reports of the United States Commissioner of Agriculture — Fissures are filled with oil gas and salt water and different wells strike them at different depths The oil begins and recedes seem charged from top to bottom with gas and blow off from every fissure as it is passed through by the auger Whence comes this gas if not by subterranean distillation? It is impossible to postulate the gas first and oil afterwards for that order would require the generation of pressure sufficient afterwards and the oil would be in the condition of a mechanically explosive fluid The *gas must be a subsequent expansion of the oil* as it is in the case of coal mine fire damp

The more copious wells says Prof Lesley in his Geological report on the Red Bank Furnace properties are no doubt all of them in communication with fissures as in fact the dropping of the rods often proves But the sand and gravel beds are themselves sponges saturated with oil and water and permit a feeble circulation of these fluids through their entire extent produced perhaps chiefly by the *vis a tergo* of the gas, but also necessitated by the laws of hydrostatics These spongy oil rocks are enormous reservoirs of petroleum, which it is impossible to exhaust for many years, as a simple calculation will soon show

Every foot of gravel rock may be considered to consist of three-fourths quartz &c, and one-fourth cavity, cleaned out by long percolation and now occupied by water and oil The proportion which the oil bears to the water in the bed is unknown but must be far greater than in the whole 30 feet of sandrock to the top of which the gravel lies or the oil will settle in these top layers of gravel while the water remains in the body and lower layers of the sandrock If the proportion in all be 1 to 100 or the sake of the calculation) the proportion in the gravel may be 1 to 10, and in the few inches at the extreme top, even 10 to 1 It we should suppose only the uppermost four inches of the whole sandrock mass, charged with pure oil that would give an absolute layer of oil one inch thick underspreading the whole country as far as the sand rock extends, to about 4 000 of square inches under every square mile, or in other words, 17 1-3 millions of gallons—551,706 barrels *Each sandrock* should be able to supply from *each square mile* of its area the whole present oil produce of the United States for ninety days, before it is exhausted and that without any reference to the accumulation of petroleum in fissures.

Some of the main fissures are known to be four inches wide Suppose them to be of all sizes from four inches to a quarter of an inch in width and at various distances asunder from 10 to 50 feet and to be limited to the sandrock itself, say 30 feet in height then we will have the contents of the fissures equal to say 1—900 the mass of the rock And supposing the oil to occupy but 1—10 of the space in each fissure the rest being occupied by gas we have a yield of oil from each square mile of the sandrock in addition to that above assumed to nearly 50 000 barrels of oil Data is at the lowest calculation In each that of the North Beaver Valley, only a few years ago we have only to go a single foot or five feet in sinking the pipe and lower tools to the depth or depth of one or two hundred feet in extending a mile or more in length the oil contents of which will mount millions of barrels apart from all side oil along the line of one such fissure is easy to conceive that a dozen fissures of 10 miles might last a several years By ordinary wells it would be practically inexhaustible

The most recent and use of petroleum are very ancient Deuteronomy 32 chapter 13 verse these words And he made him to suck honey out of the rock and oil out of the flinty rock Job 29 ch 6 verse And the rock poured me out rivers of oil Micah 6 ch 7 verse Will the Lord be pleased with thousands of rams or ten thousand of rivers of oil?

In Parma and Modena in Italy petroleum has been extracted from the earth since its first discovery in 1640 The Birkoo Springs near the Caspian sea have yielded large quantities of oil from time immemorial On the Eastern bank of the Irrawaddy river in Burmah is a group of eighty producing oil wells which are included within an area of not more than one half a square mile About a mile to the southward is another group of fifty In some places they are less than one hundred feet apart The annual yield of these two groups was some years ago 11 000 tons Their depths vary from 150 to 500 feet It will be allowed to be fallow for awhile as its product diminishes It is not known how long these wells have yielded oil but the Burmese have a tradition or note of the time of the original discovery of petroleum The time of that discovery may have been a hundred or more years since The Pennsylvania oil region has been too recently developed to enable us to compare its wells with those of Burmah so to continue use of supply We may instance however the Phillips well on the Tarr farm in Venango county among others which has produced a large quantity of oil almost continually for seven or eight years Many wells after having been apparently exhausted have yielded abundantly after years of abandonment

It is say the authors that Petroleum a debatable question whether the oil supply becomes exhausted in any locality The wells may be come flooded and rendered unproductive or at time at least But we are of the opinion that whenever the heavy body of water is removed the wells will again prove productive probably not to so great an extent as before

The question whether there is any production of petroleum going on at the present time While we are free to admit the antiquity of the evidence from which the information was first evolved we cannot believe that its manufacture is to speak has ever ceased The same causes that it first produce still exist and are actively at work as in any other age of the world and the same elements are equally abundant

NEWSPAPER ARCHIVE®

Titusville Morning Herald.

Taking Water.

From the Pittsburgh Eagle.

The Hudson River Railroad Company have just adopted the English method of giving locomotives water, a method at once novel and efficient. The company recently constructed at Montrose station a trough in the centre of the track one thousand two hundred feet long, fifteen inches in depth, and eighteen inches wide, and caused it to be lined with sheet iron, heavily painted. This trough is perfectly straight throughout the entire one thousand two hundred feet. A short distance to the north and east of it is a spring which supplies it with water, the trough holding sixteen thousand gallons, which can be let into it at will.

Locomotive No. 43, Ned. Sanford, engineer, was next taken from the road and put in the shop, where, in a quiet manner, skillful mechanics soon fitted her out with an ingeniously formed pipe, curling from the man-hole in the tender down through the latter to a position inside of the hind trucks, where the pipe forms a half circle, at the end of which is the nozzle, which always points the way the engine goes. Fastened to this nozzle is an iron bar which connects with a point near the fireman's box, by which, when the locomotive comes to the trough, the nozzle or pipe can be dropped instantaneously into the water, while the train is running at the rate of thirty miles an hour. The nozzle sinks to only a depth of two inches in the trough, yet even at that depth, when the one thousand feet is passed over, one thousand six hundred and thirty-four gallons of water will be found in the tender.

There are many improvements connected with it, all the handiwork of Master Mechanic Buchanan. He has been at work experimenting since the 20th of May last, and has always been encouraged by Superintendent J. M. Toucey, who has been a firm believer in the plan from beginning to end. The first experiment in taking, or as some of the engineers say, "jerking the water," occurred yesterday morning. The locomotive rushed over the rails, even to which is the trough, at the rate of thirty-five miles an hour. As the nozzle struck the water, the fluid rushed into the tender with a roar like a young Niagara, and when the trough was left behind the fireman found his tender full.

Every movement was crowned with success, and the locomotive later in the afternoon was attached to the New York special which left Poughkeepsie at 4:15 P. M., which train proceeded direct to New York without stopping anywhere; a feat at once novel and giving promise of greater deeds in the future. It is next proposed to locate a trough between Catskill and Hudson, and points on the Central road, so that in time, trains aided by this process of stopping nowhere for water, may run through to Chicago in twenty-four or twenty-six hours. The Hudson River Railroad Company was the first in this country to adopt this important invention, and in fact all others of any consequence. It is indeed one of the greatest inventions of the age, and must come into general use on railroads.

ORDINANCE

Relative to the curbing and guttering of south side of Pine street, between Franklin and Martin streets.

Be it enacted by the Common Council of the City of Titusville, and it is hereby enacted by the authority of the same,

SECTION 1. That each of the owners or occupants of all lots or parts of lots on the south side of Pine streets, between Franklin street and Martin street, be required on notice from the Street Commissioner to them, to immediately make and construct a good and suitable curb and gutter five feet from the curb stone, and the curb stone to be not less than eighteen inches wide and six inches in thickness in front of their several lots on the said south side of Pine street, between Franklin and Martin streets, to be constructed in uniform manner as shall be reasonably directed by the Street Commissioner.

SEC. 2. On failure of said owners or occupants, or either of them, to construct the curbing and guttering in manner as aforesaid, within ten days after said notice is given to them, it shall be the duty of the Street Commissioner to cause the said curbing and guttering to be done, and to collect the cost of the labor and material, with twenty (20) per cent. thereon, from the respective owners or reputed owners or occupiers of said lots, with authority to proceed under the laws relating to mechanic and sidewalk liens, or in any other lawful manner, against said lots, or owners or occupants.

Passed in Council 15, 1870.
W. W. BLOSS, President of Council.
Attest: GEO. A. CHASE, City Clerk.
Approved, June 15th, 1870.

A BEAUTIFUL

HOME for SALE,

AT A LOW PRICE, and on EASY TERMS, about $3000 down, balance on time. It is known as the

FAIRBANKS FARM.

It is situated on the main road, about one and a quarter miles west of Fredonia, Chautauqua county, New York, just outside of the corporation limits, yet having all the advantages of schools, churches, stores, postoffice, &c. Is about five miles east of Brocton, and only about five hours ride on railroad from Titusville. The State Normal School, a first-class institution, is located here. We have a most desirable neighborhood, and the best of society. There is between fifty and sixty acres of land, in good condition, wood plenty for fuel, &c. A great variety of fruit, a large apple orchard, peaches, plums, pears, cherries, quinces, grapes, currants, raspberries, strawberries, &c. The improvements are a first-class brick house, well built, containing eleven rooms, with large dry cellar, wood shed, good barn and carriage-house combined. The house is built on an eminence, and is surrounded by a large and choice variety of shrubbery, shade trees, evergreens, &c., and is altogether a very desirable place. Possession will be given at once, as the owner intends returning west. For further information address MRS. M. A. JAMES,
jel1-2m Box 51, Fredonia, N. Y.

LOTS IN THE CITY.

The mill property, head of Franklin street, has been divided into lots, and will be sold at prices varying from $150 to $1,500, with buildings thereon. Terms easy. Also, HOUSE AND LOT, 50x180. Price $4,000.

may23-tf THOS. L. HOBART,

TWO WELLS FOR SALE.

I offer for sale Two Producing Wells, small but valuable, with tools, machinery, rigs, and everything in working order. A rare opportunity for a *live* working man to make money.

J. W. HUMPHREY,
